PROFESSIONAL SUMMARY

Computer Science Engineering student with hands-on experience in full-stack web development, backend integration, and database management. Skilled in React, Vite, Node.js, Express.js, Supabase, and REST API development, with practical experience implementing authentication and role-based access control across multi-role applications. Strong foundations in C++, OOP, STL, and DSA, with a long-term focus on game development and graphics programming. Seeking an Entry-Level Software Developer / Full-Stack Developer role.

EDUCATION

Sahyadri College of Engineering and Management, Mangalore, Karnataka June, 2028
Bachelor of Engineering in Computer Science Engineering CGPA/GPA: 9.23 / 10
Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence & Machine Learning Fundamentals, Cloud Computing, Database Management Systems, Object-Oriented Programming, Advanced Web Technologies.

TECHNICAL SKILLS

- **Languages & CS Fundamentals:** C++, JavaScript, Object-Oriented Programming (OOP), Standard Template Library (STL), Data Structures & Algorithms (DSA).
- **Backend & Databases:** Node.js, Express.js, REST APIs, Supabase, Firebase, SQL, Authentication & Role-Based Access Control (RBAC).
- **Frontend:** React.js, Next.js, Vite, Tailwind CSS, HTML/CSS.
- **Tools & Practices:** Git/GitHub, Debugging, API Integration, Database Design, Agile Project Management, UI/UX Prototyping (Figma), ESLint.
- **Emerging Interests:** Generative AI Integration (Gemini API), Document Intelligence, Game Development & Graphics Programming (long-term focus).

PROBLEM SOLVING

- Solved 160+ data structures and algorithms problems in C++ on LeetCode, applying STL containers (`unordered_map`, `priority_queue`) and patterns including monotonic stacks, binary search, bucket sort, and frequency maps; strongest in Arrays, Math, and Hash Table categories.

ACADEMIC & APPLIED PROJECTS

QuickFix Grocery (Hyperlocal Delivery Platform) 2026
Full-Stack / Multi-Role Web Application

- Built a full-stack hyperlocal grocery delivery platform with four role-based modules — Customer, Delivery Partner, Picker, and Admin — using React, Vite, Express.js/Node.js, and Supabase (Database, Auth, Realtime).
- Implemented authentication and role-based access control (RBAC) across all four user roles, securing route- and action-level permissions via Supabase Auth.
- Designed the end-to-end order-fulfillment pipeline: order placement, picker item-availability confirmation, bounded-wait substitution handling, and delivery assignment, with database synchronization across all modules using live Supabase data (no mock data).

- Built an admin dashboard surfacing operational analytics, including substitution rate per store and fulfillment time, via REST API integration with the backend.
- Debugged and iterated on the substitution-matching flow using screen-recording-based QA to identify and resolve mismatched item suggestions.

AI Document Intelligence Platform Feb 2026

Capstone / Core Project

- Engineered an AI document intelligence website by integrating Gemini AI for vision-based document analysis, reducing manual data entry effort.
- Automated extraction of document registration and expiry dates, connecting AI output directly to Firebase for secure database storage.

Smart Curriculum Attendance System Sep 2025

Academic / Course Project

- Developed a smart curriculum attendance tracker implementing a localized QR code scanning mechanism to speed up attendance logging for lecturers.
- Designed the application's frontend interface using Figma for UI/UX prototyping, improving user navigation efficiency.

Resto (Restaurant Application) April, 2026

Full-Stack Web Project

- Built a highly responsive full-stack restaurant application using React.js, Next.js, JavaScript, and Tailwind CSS.
- Maintained code quality and project efficiency by implementing ESLint and modular component design within VS Code.

fireTodo (Task Management Tool) March, 2026

Database Integration Project

- Engineered a full-stack task management application by integrating a Supabase connection for backend storage and REST API-based data retrieval.
- Optimized cross-platform data synchronization, utilizing cloud databases to securely store user-provided information with zero data loss during active sessions.
